PROFESSIONAL SUMMARY

Computer Science and Engineering undergraduate focused on Cloud Computing and Backend Development. Hands-on experience building AWS infrastructure, automating cloud resources using Python and Boto3, developing backend applications, and working with Terraform, Linux, and modern cloud technologies. Experienced in building practical cloud and AI-based projects with a focus on automation, deployment, and scalable systems.

PROJECTS

CloudPilot AI — AI-Powered Cloud Infrastructure Assistant

- *Python • AWS • Boto3 • Terraform • Flask • AI*
- Developing an AI-powered cloud assistant that converts natural-language infrastructure requests into AWS resource configurations.
- Designed a workflow for request parsing, infrastructure planning, resource preview, and cloud resource management.
- Exploring Terraform-based infrastructure provisioning to automate deployment while giving users visibility before resource creation.

NETGUARD AI — Network Threat Forecasting System | SIH 2026

- Python • FastAPI • Machine Learning • AWS • Docker • PostgreSQL
- Developed an AI-based network security system that analyzes evolving network states to forecast potential attacks and intrusion behavior.
- Worked on backend integration, cloud deployment, system architecture, and live application infrastructure as Team Lead.
- Designed the system around network-state windows and multi-step threat forecasting rather than relying only on static attack classification.

AWS Cost Optimization using Lambda & Boto3

- *AWS Lambda • Python • Boto3 • EventBridge • SNS • CloudWatch*
- Developed a serverless solution to identify and manage stale AWS resources to reduce unnecessary cloud usage.
- Automated AWS resource operations using Python and Boto3 through AWS Lambda.
- Integrated EventBridge scheduling and SNS notifications for automated monitoring and alerts.

Flask Authentication & User Management System

- *Flask • Python • MySQL • REST APIs • JWT • Werkzeug*
- *Developed a Flask-based authentication system with user registration, login, logout, and protected routes.*
- *Implemented secure password hashing and database-backed user management using MySQL.*
- *Added password-reset functionality with token-based verification and environment-based configuration.*

TECHNICAL SKILLS

- **Cloud & AWS** : AWS, EC2, S3, IAM, VPC, Lambda, CloudWatch, SNS, EventBridge
- **Programming** : Python, C, Java
- **Backend** : Flask, REST APIs, MySQL
- **Cloud Automation** : Boto3, AWS CLI, Terraform
- **DevOps & Systems** : Linux, Git, GitHub, Nginx

EDUCATION

- **Gayatri Vidya Parishad Institute Of Higher Learning and Research (GVPIHLR)**
- South East Campus - Rushikonda
- *Bachelor of Technology — Computer Science and Engineering*
- *Expected Graduation: 2029*

CERTIFICATIONS

- **AWS Cloud Practitioner Essentials —** Amazon Web Services
- **Computer Networking —** Scaler
- **Cloud Computing** - NPTEL
- **Java (Basic)** — HackerRank
